ITC
INOVACIJSKO TEHNOLOŠKI GROZD
INNOVATION TECHNOLOGY CLUSTER

AGRIFOOD
DIGITAL INNOVATION HUB

Global Foodture in a nutshell

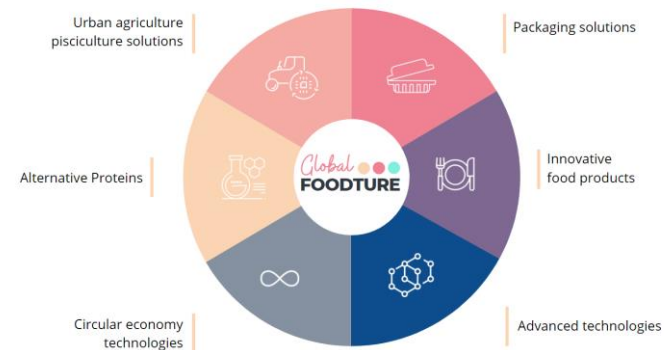

Global Foodture is a project designed to **boost the sustainable transition of the food system worldwide through collaboration and innovation** aiming to stimulate innovation collaboration between European SMEs and Asian organisations: Japan, Singapore, South-Korea & Thailand

Themes

- **Agriculture - cultivation & support solutions**
- Alternative proteins
- Sustainable packaging
- Solutions to reduce food waste
- Health products, functional and personalised food

Activities

- 2022 - 2023: Online matchmaking, training program, **thematic workshops** and onsite international missions to Thailand and Singapore

Consortium

Global Foodture is co-funded by the European Union's COSME Programme. The content of this document represents the views of the author only and is his/her sole responsibility; it cannot be considered to reflect the views of the European Commission and/or the European Innovation Council and SMEs Executive Agency (EISMEA) or any other body of the European Union. The European Commission and the Agency do not accept any responsibility for use that may be made of the information it contains.

Focus on four Asian countries

- The target region selected for this ambitious project is **Asia**, particularly the four key markets of
 - Japan
 - South Korea
 - Singapore
 - Thailand

Programme

- 09.00 Welcome and Introduction by Darja Kukovic, Project manager, ITC Cluster
- 09.05 “Digitalising traceability systems using blockchain technology as the natural technology go to ” by Prof. Muhamed Turkanovic, University of Maribor – Blockchain Lab:UM
- 09.20 “Use applications of blockchain in biovalorization ” by Mateja Dermastia, ANTEJA
- 09.30 “Trust and transparency of data in food supply chain using OriginTrail DKG” by Tomaž Levak, Trace Labs - OriginTrail Core Developers
- 09.40 “AI-Powered Global AgriFood Trade with Visibility & Finance” by Gary Loh, DiMuto
- 09.50 End of Master Class 1 and start of Master Class 2
- 09.55 Introduction to masterclass 2 by Darja Kukovic, Project Manager, ITC
- 10.00 “Focusing on sustainable business with AGRIVI”, by Antonija Šoštarić, AGRIVI
- 10.15 “agroNET: from optimizing farm operations to monetizing farm data” by Srdjan Krco, DUNAVNET
- 10.25 “Data based precision livestock farming” by Zoltan Tarr, CUBILOG
- 10.35 “ Design of an agricultural information system for the Asian Monsoon region ” by Takanori Nagano, Graduate School of Agricultural Sciences, Kobe University
- 10.45 Q & A - Wrap & Closing by Darja Kukovic, Project Manager, ITC
- 11:00 End of Thematic Workshop

Global ● ● ●
FOODTURE

Master Class 1

Focus on the use of blockchain technology in in food systems

Trust and transparency of data in the food supply chain using OriginTrail DKG

Tomaž Levak

Founder & Managing Director @Trace Labs -
OriginTrail Core Developers

Trust has two enemies

Bad character

Impossible to eliminate

Bad data

Possible to reduce

Challenge

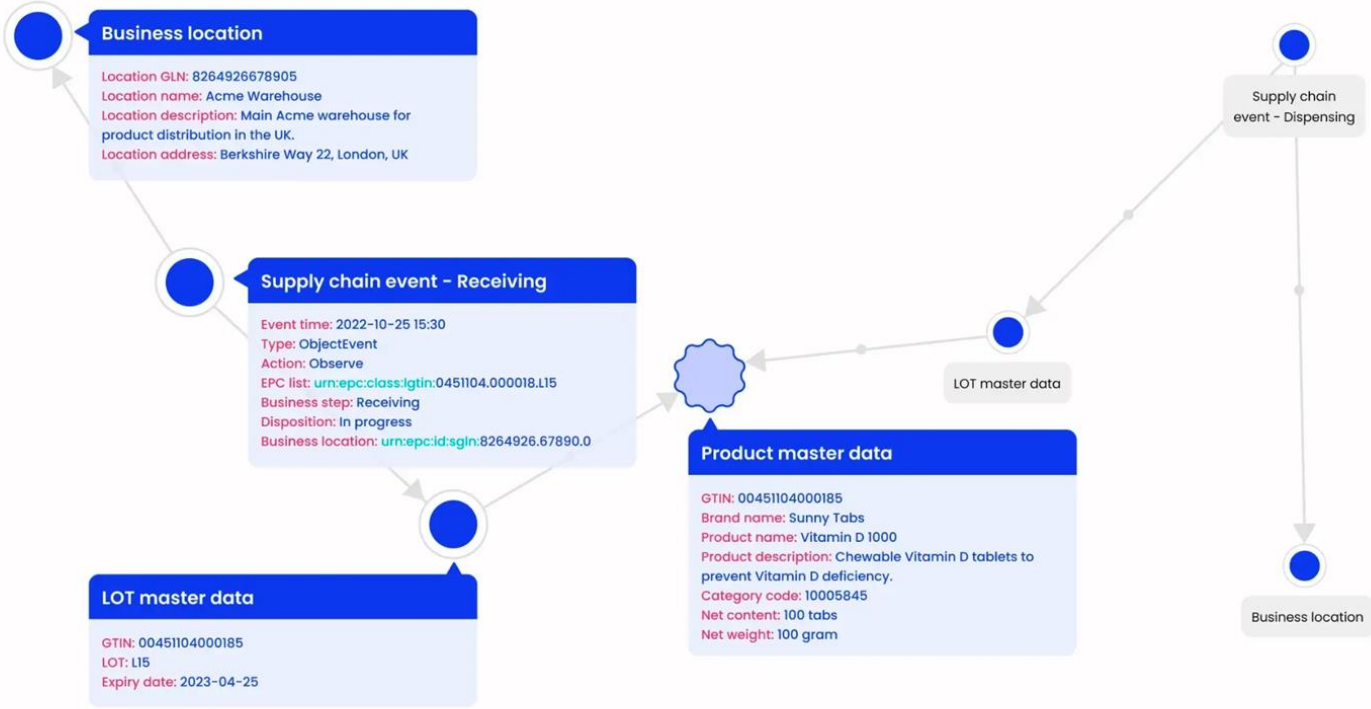

Organizing **knowledge assets**,
making them discoverable and
verifiable for a **sustainable global
economy.**

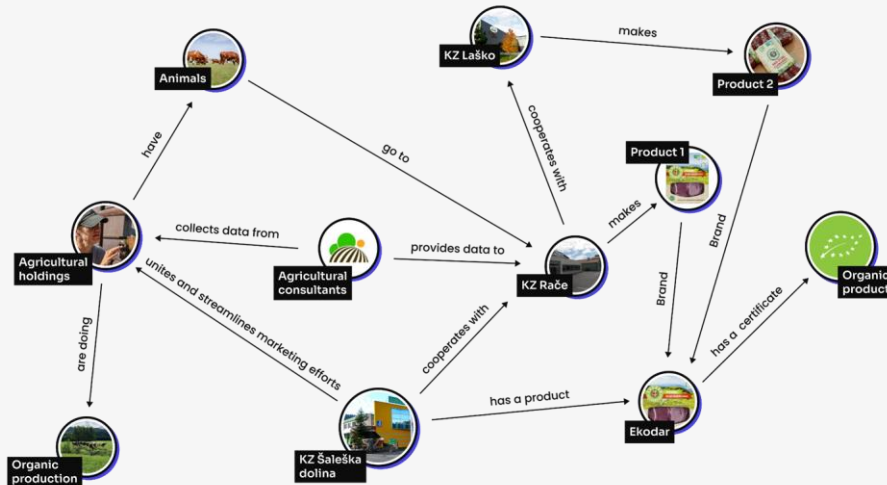

What makes Knowledge Assets special?

Knowledge Assets can be owned	Knowledge Assets are composable	Knowledge Assets are discoverable
Knowledge Asset data can be private or public	Knowledge Asset data is structured.	Knowledge Asset data has integrity.

Example of connected knowledge assets

OriginTrail Decentralized Knowledge Graph

Global trusted knowledge infrastructure

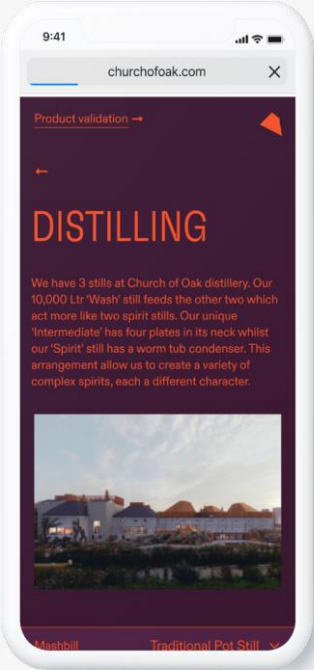

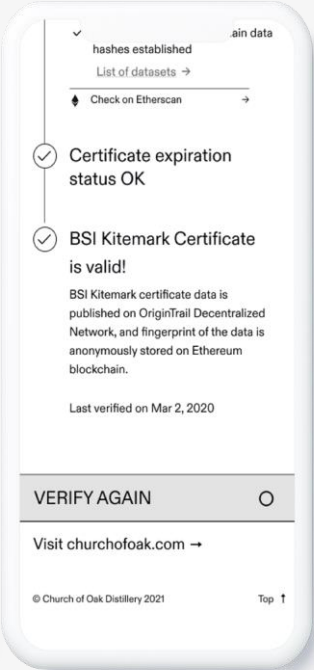

Ability to discover, verify & share knowledge based on OriginTrail protocol

Applied in food supply chains since 2013, expanded to various sectors

Transparency and trust in agri-food sector

Sustainable brand promise

“OriginTrail is not a company, it is an ecosystem”

Ecosystem map

DECEMBER 2022

HIGHLIGHTED PARTNERSHIPS

IMPLEMENTATIONS

GOVERNMENTS SECTOR

AWARDS AND RECOGNITIONS

ECOSYSTEM TOOLS AND RESOURCES

STANDARDS

INFRASTRUCTURE

INSTITUTIONAL SUPPORTERS

TRACE ALLIANCE MEMBERS

origintrail.io

Leading global companies' solutions on OriginTrail

Trusted factory

BSI and SCAN are utilizing the OriginTrail protocol to ensure the integrity of security audits for over 40% of US imports.

Rail Travel Safety

Ensuring the safety of train travel by tracking every piece of rail track material used by the Swiss Federal Railways.

Food and Beverage Traceability

A “transparency-by-design” traceability solution ensuring brand’s core consumer promise for a start-up Irish Distillery.

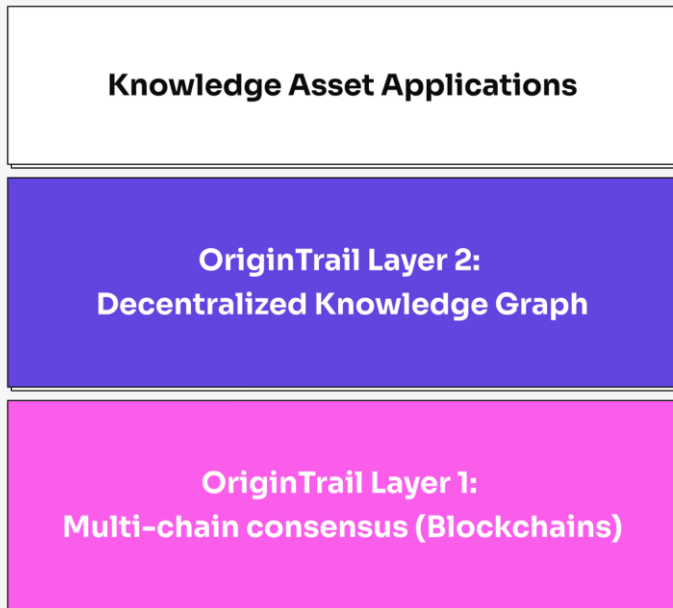

Pharmaceuticals

Making sure patients receive the right treatment is crucial for the global healthcare system. We help achieve that and are proud to be supported by the World Economic Forum along the way.

OriginTrail synergizes blockchains and knowledge graphs

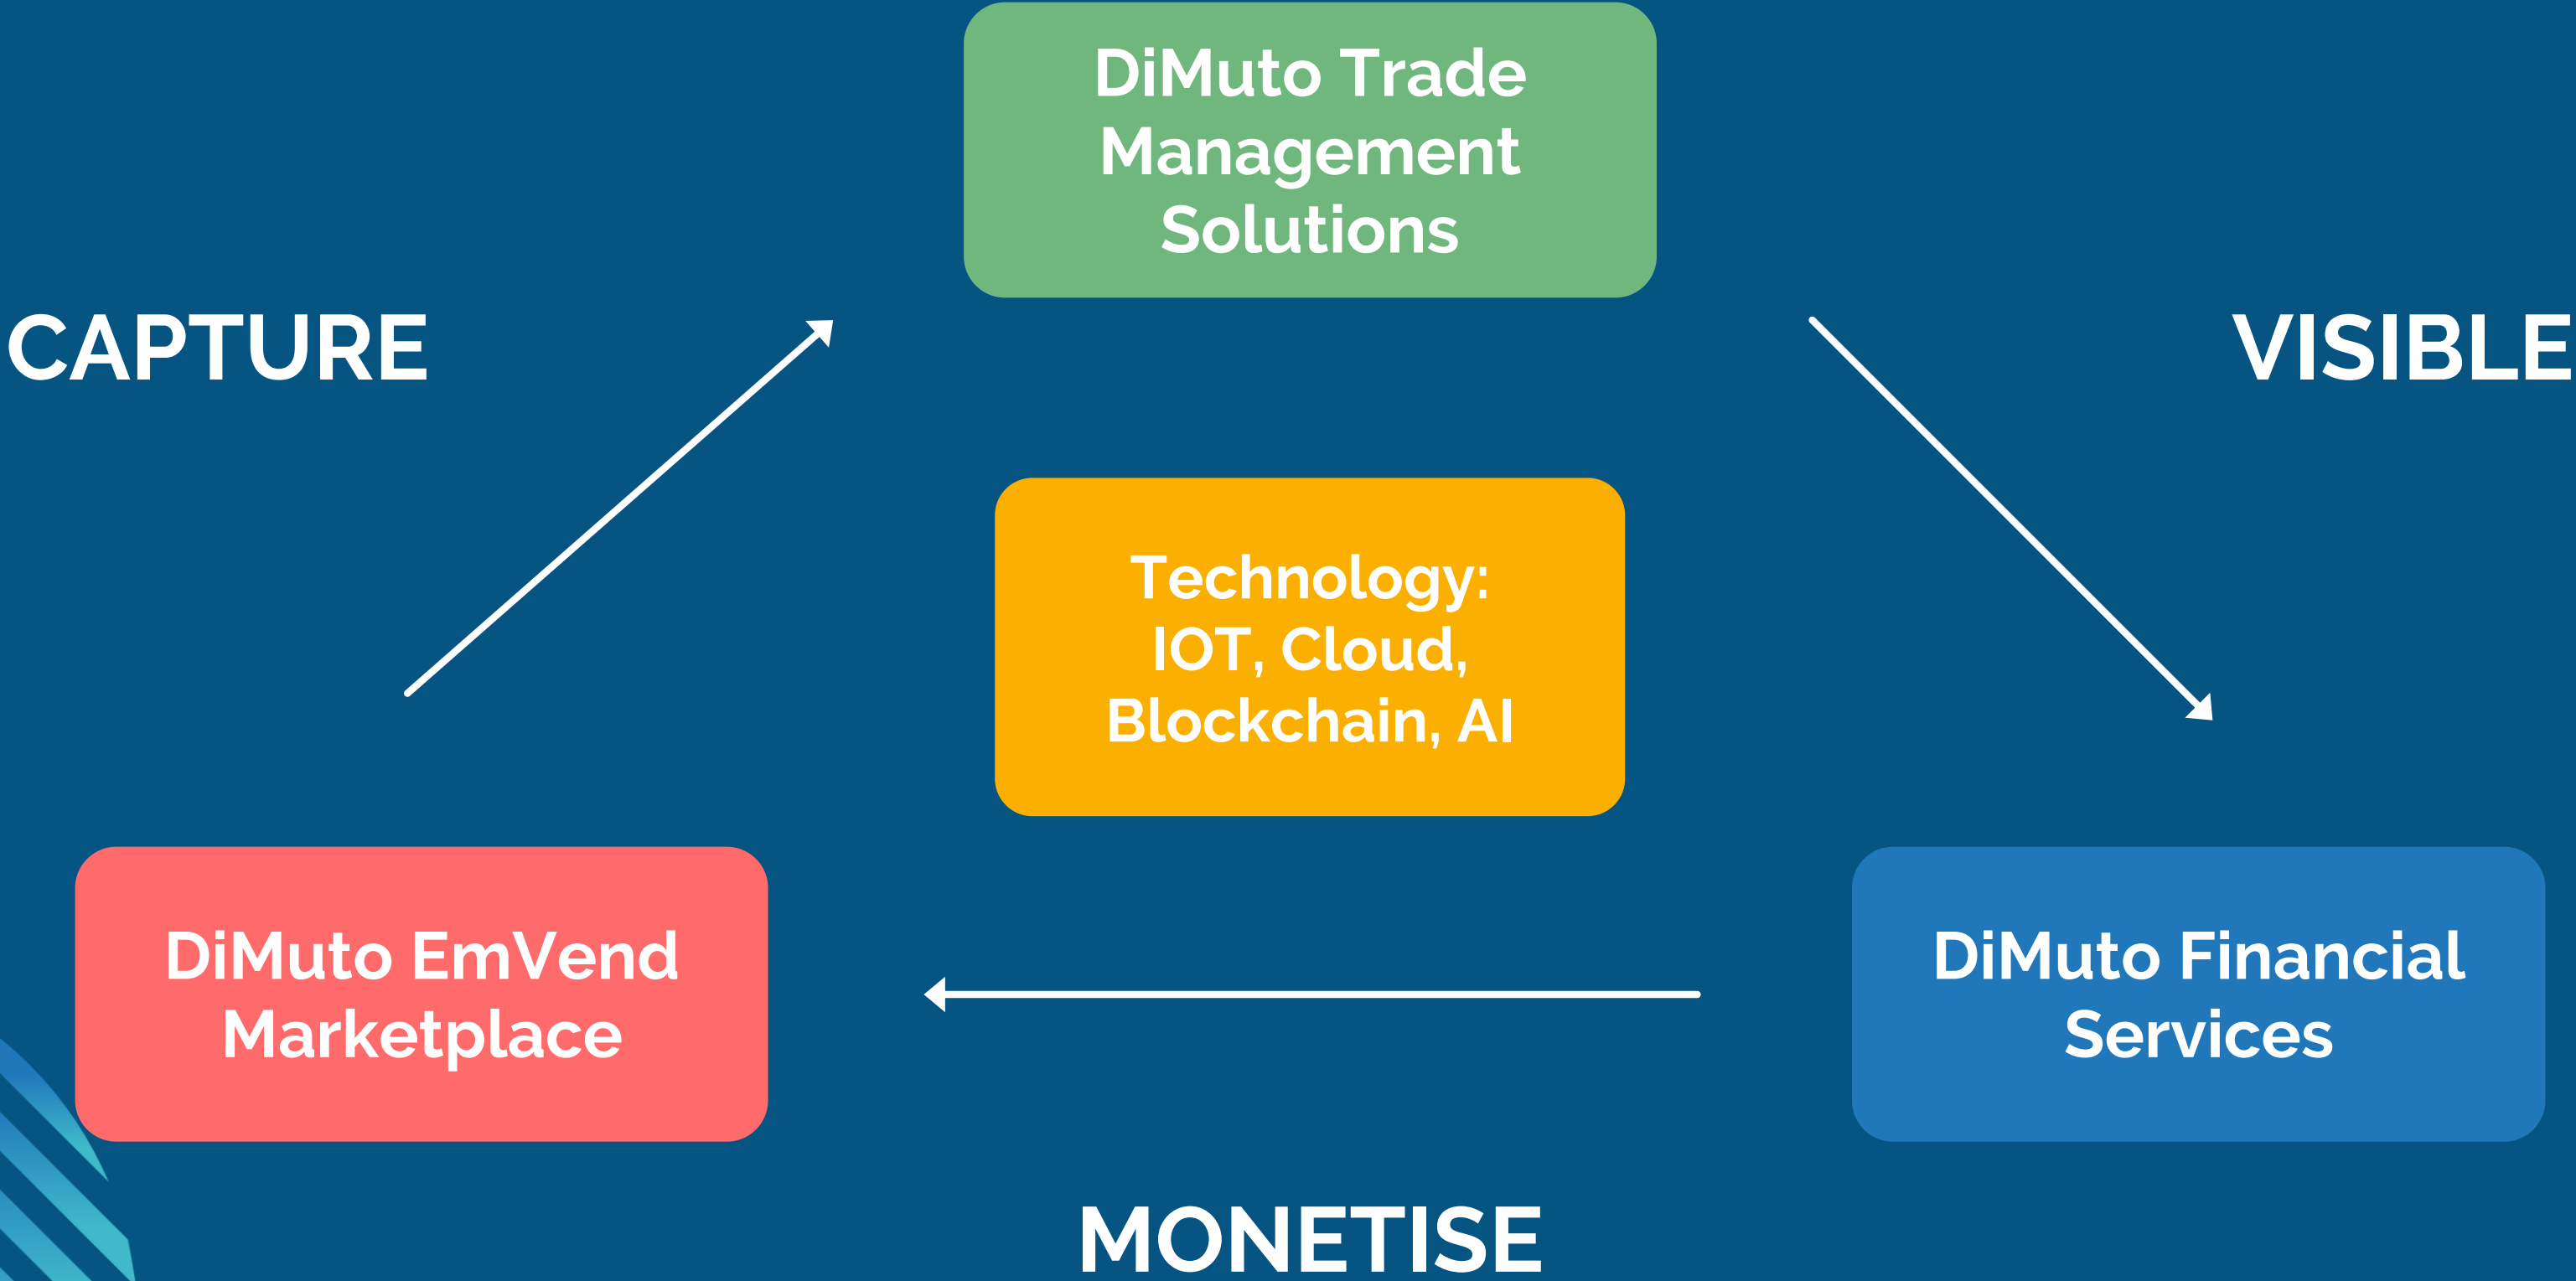

- Multi-blockchain decentralized knowledge graph
- Key primitive: Knowledge Assets, designed to support GS1, W3C and ISO standards
- Hosted on the permissionless OriginTrail Decentralized Network, open source software
- Supporting various applications in synergy with knowledge graph tools, blockchains and AI

Visibility-Enabled Financing

Proprietary Trade Health AI technology to assess trades

Indicator	Relevant Data Source	Interpretation
Product Quality Risk	PQ Score	The lesser the number of defects, the lesser the credit risk
Payment Dispute Risk	Payment Dispute Score	The lesser the number of late payments, nonpayments and partial payments, the lesser the credit risk
Shipment Score	Shipment Score	The lower the number of shipment delays (taking into account the port in which the goods are shipped from) , the lesser the credit risk
Buyer/Seller Freight Risk	Incoterms 2020	Depending on whether the firm seeking financing is a buyer/seller, and by what mode of transportation are the goods being delivered by, the firm will be assigned a respective credit score
Trade Value Risk	Trade Value Risk	The lower the trade value of the contract ,the lower the credit risk
Trade Activity Risk	Trade Activity Risk	We will be looking at the number of SKUs, Containers, Companies and Countries traded with in the past 6 months. The higher the frequency, the lower the credit risk
Collaboration Risk	Collaboration Risk	We will be looking at the containers & total trades between counterparties
Profitability Risk	Annual Reports	Gross Margin, Net Profit Margin, ROA & ROE relative to Industrial averages or comparable companies
Liquidity Risk	Annual Reports	Current Ratio, Quick Ratios relative to industry averages or comparable companies
Efficiency Risk	Annual Reports	Acc Receivable, Acc Payable, Inventory Turnover, Cash Conversion Cycles relative to industry averages or comparable companies
Solvency Risk	Annual Reports	Debt ratio, Debt to Equity relative to industry averages or comparable companies

DASHBOARDS FOR INTERACTIVE ANALYTICS

- ✓ Yield analysis per field, crop and variety
- ✓ Crop profitability analysis (revenue, expenses, profits per crop)
- ✓ Field analysis (inputs, weather, work per field)
- ✓ Resource utilization analysis (machinery, people)
- ✓ Farm finance KPIs (profitability, return on investment, etc.)

REPORTS (EXPORT TO PDF AND EXCEL)

- ✓ Input usage report (fertilizers, pesticides, irrigation, etc.)
- ✓ Harvest report per crop and variety
- ✓ Farm finance reports
- ✓ Reports for certification (Global GAP, ISO)
- ✓ Reports for authorities

Global Coverage with Localized Software Experience

LANGUAGES

User interface and product manuals available in over 10 languages.

CURRENCIES AND UNITS

All global currencies available. Platform supports metric and imperial measurement units.

LOCAL PRODUCTS

Built in database of commercial fertilizer and crop protection products with possibility to add local products.

LOCAL PEST ALERTS

Pest alarms for pests present in the country. Pest models calibration by region.

Precision Agriculture with VRA

MULTI-LAYER MAPS

Prescription map creation based on 8 vegetation indices from satellites, soil and yield maps.

MANAGEMENT ZONES

Variable product distribution on up to 20 management zones per prescription map.

UPLOAD TO MACHINERY

Direct upload from AGRIVI to the machinery or export into file for USB use.

SIGNIFICANT SAVINGS

Save 20-40% of inputs with variable rate application.

Management zones ⓘ Rate

Full Crop Production Traceability

MARKET YOUR PRODUCE AS PREMIUM

- 1 Generate QR code for harvested produce
- 2 Put QR code on your produce packaging
- 3 Consumers can scan QR code on packaging
- 4 Traceability data is shown on a mobile web

TRACEABILITY DATA

- ✓ Resources used (work hours, fuel, irrigation)
- ✓ Crop nutrients applied (nitrogen, ..)
- ✓ Active substances applied
- ✓ Nutrition data (calories, protein, carb, fat)
- ✓ Field location on a map
- ✓ Photos of the farm

12  SUSTAINABLE DEVELOPMENT GOALS

Case study

Barbados Agricultural Management Company (BAMC)

Company manages and operates around 30% of the sugar industry in Barbados.

They grow sugar cane, starch crops, and cotton.

*Orlanda Atherley,
CEO at Barbados Agricultural
Management Company*

“We had all the information but no tools to help us gather it all in one place and assess productivity and efficiency. We also had no accountability at the farm level. This is where AGRIVI came in and really helped us organize our business. We’ve seen a 10-15% increase in revenue already, and we’re only just starting.”

DELIVERING TANGIBLE BENEFITS.

OPERATIONAL

- ✓ Better risk mitigation
- ✓ Timely decision-making
- ✓ Full operations management control
- ✓ Traceability and food safety compliance
- ✓ Simplified administration

BUSINESS

- ✓ Cost savings
- ✓ Yield volume increase
- ✓ Yield quality increase
- ✓ Higher profitability

ESG

- ✓ Improved carbon footprint
- ✓ Support for scaling regenerative practices
- ✓ Labor demographics and utilization control

Some of our Partners

BOS-FRUCHT

THE POTENTIAL OF DIGITIZATION IN INTENSIVE LIVESTOCK FARMING

Herd-level monitoring: animal health, oestrus, reproduction

Monitoring of housing conditions: animal welfare, environmental impact

Process monitoring: monitoring of the entire management and production processes (including farm equipment)

Resource efficiency monitoring: human resource usage, energy consumption data

DIGITIZATION BENEFITS & CHALLENGES

The benefits of precision livestock farming

- improving animal health and welfare
- reduction in treatment costs
- increased productivity and product quality
- accountability and transparency
- less harmful environmental impact

Challenges of precision livestock farming

- not yet standard - implementation phase
- relatively high asset costs
- lack of local digitization expertise
- few independent expert suggestions
- low level of integration of available solutions

OUR METHODOLOGY

We propose a Framework to unlock the road to operational efficiency and Innovation

DATA-BASED FARM MANAGEMENT

Digital decision making support process

MEET THE PRODUCTION CHALLENGES WITH BETTER DATA AND MORE INFORMATION

DATA INTEGRATION - DATA FROM AUTONOMOUS SYSTEMS

DATA COLLECTION - MICROCLIMATE MONITORING

FarmRadar
Livestock monitoring

DATA PROCESSING,
REPORTING, ANALYSIS

DATA-BASED CONSULTANCY
AND OPTIMISATION

RETURN OF INVESTMENT

Human resource usage can be optimized - cost savings can be achieved

- centralized security and technology remote monitoring

Fault prediction - production downtime can be avoided

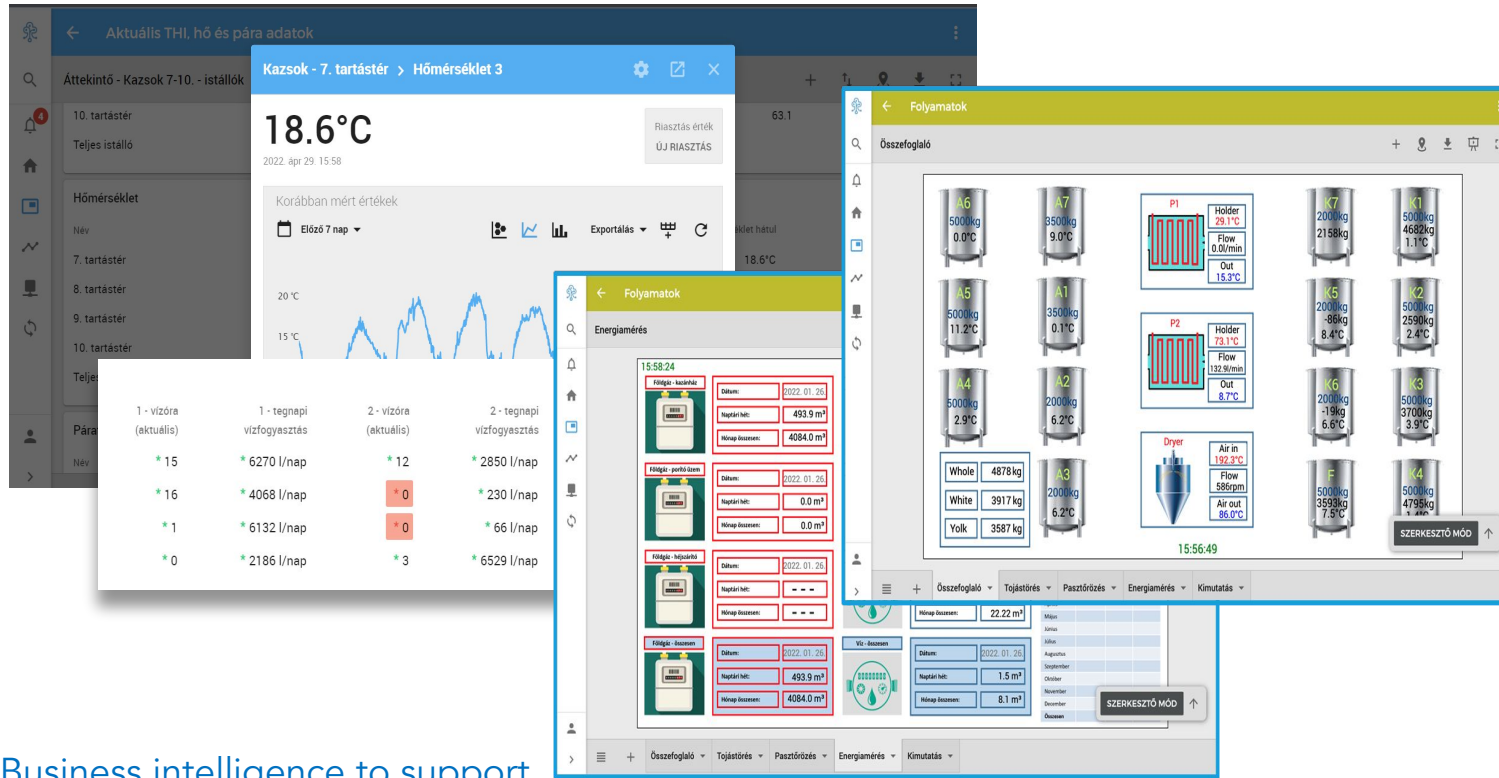

- sensory fault detection
- planned and / or predictive maintenance
- production security

Production optimization with data analysis

- production monitoring and fine-tuning
- reducing energy consumption
- filtering out human errors and omissions

REMOTE MONITORING OF LIVESTOCK FARMS

Continuously monitors existing local devices and environmental parameters (meters, climate, etc.)

Business intelligence to support decisions

Customized reports

Data, information obtained are available online

DAIRY FARM MONITORING

Functions

Heat stress prevention and monitoring

Monitoring and analysis of parameters affecting milk yield

Water consumption monitoring - do they drink enough; how much water is consumed

Farm equipment monitoring

3,3 l of water = 1 l of milk

Remote reading of water consumption per barn / per drinker

Sending regular reports from the reading via SMS and email

Measurement parameters

- Temperature
 - Humidity
 - Air pressure
 - Air movement
 - Brightness
- } THI

POULTRY FARM MONITORING

Functions

Full technology remote monitoring

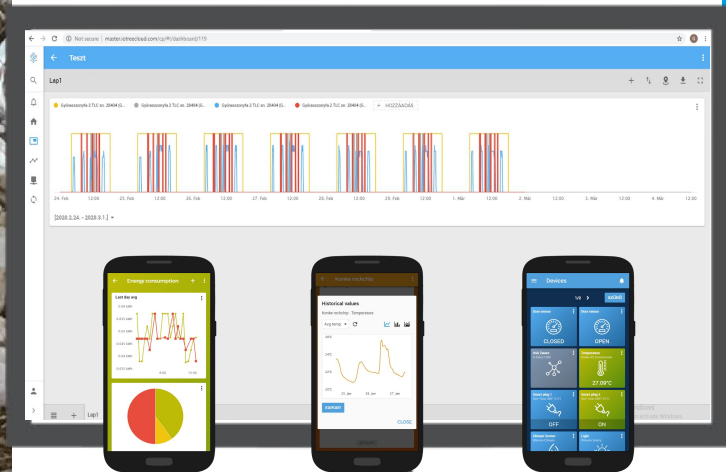

Activity logging

Fault check and alarm

Checking holding parameters

Measurement parameters

- Temperature & humidity
- Brightness
- Water consumption
- Power failure detection
- Door opening detection
- Silo scale
- Egg counter
- Camera
- Weight measurement
- Measuring air quality (CO²...)

PIG FARM MONITORING

LoRa devices

- Wireless communication (portable placement & easy installation -> less health concerns)
- Up to 8 years battery life – maintenance free

Functions

Digital tracking of technological discipline

Support and automation of quality assurance processes

Ongoing monitoring of animal welfare and sustainability aspects

Measurement parameters

- Temperature & humidity
- Brightness
- Water consumption
- Power failure detection
- Door opening detection
- NH₃ measurement

© Cubilog Ltd.

Our customer has said

„I have a better understanding of production and production processes from a distance, than when I am at the farm.”

1 Graduate School of Agricultural Science, Kobe University

2 Faculty of Agriculture, Niigata University

3 Faculty of Agriculture, Kindai University

4 Institute of Water Resources Planning (IWRP), Vietnam

5 Bogor Agricultural University, Indonesia

- Objective of European/American agricultural information system:
Maximizing production while reducing inputs (water/fertilizer)
- Objective of Asian agricultural information system:
Optimizing irrigation infrastructure management to realize good production

RESEARCH BACKGROUND

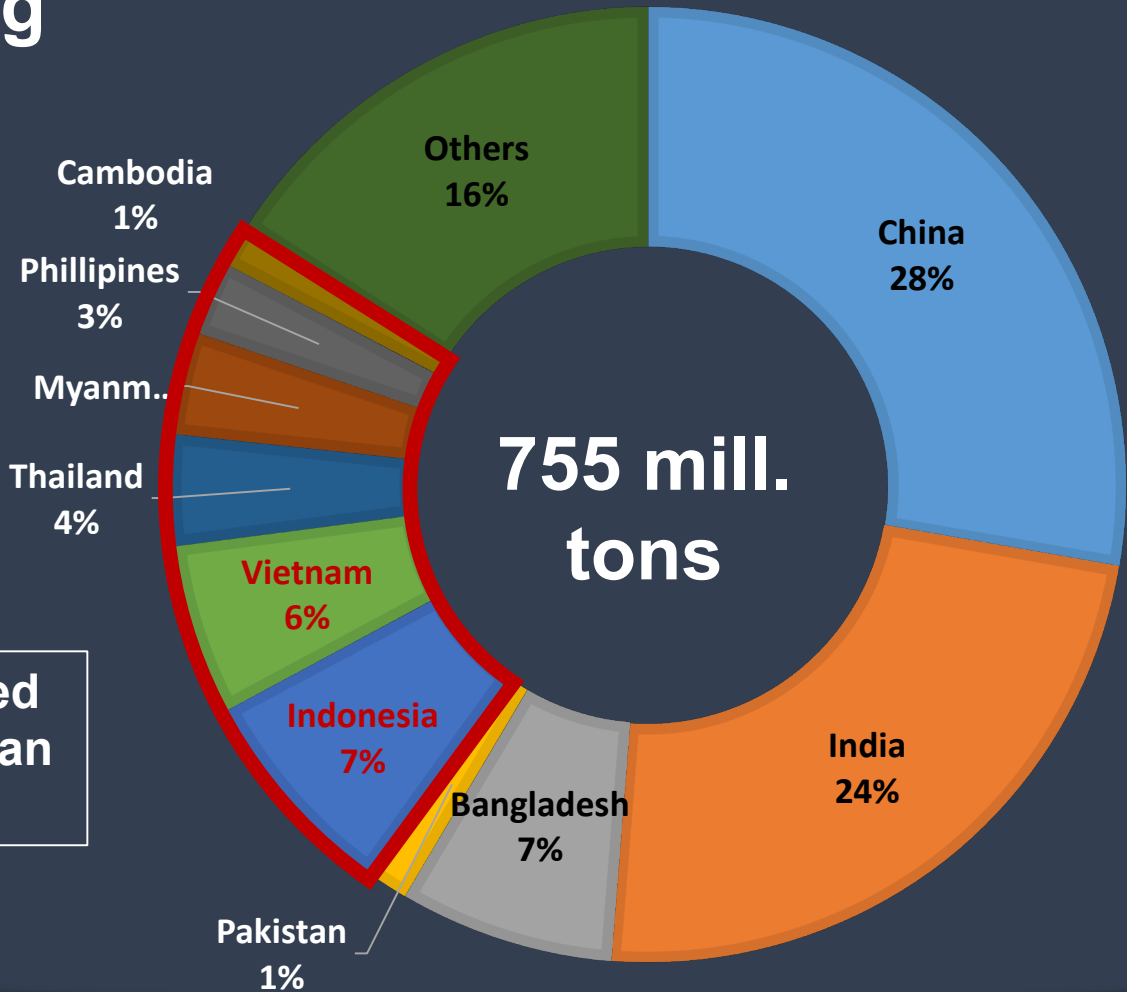

豪雨により増水した信濃川 (信濃川/2011年7月撮影)

Rice Producing Countries

1/4 was produced in Southeast Asian countries

RESEARCH BACKGROUND

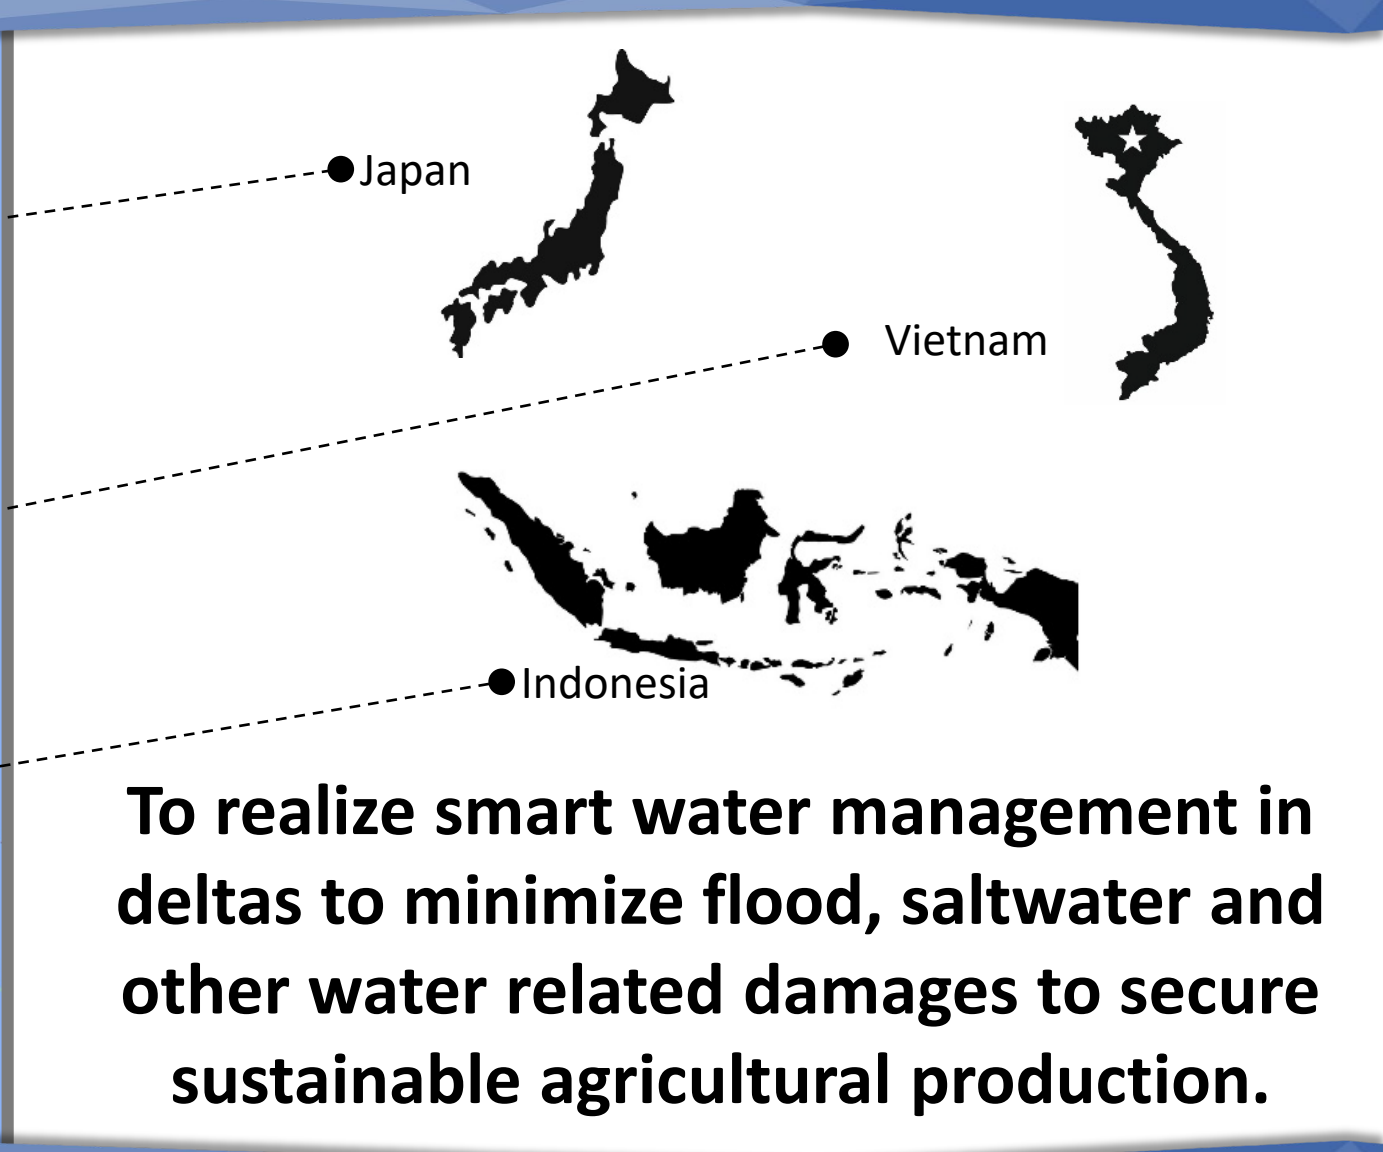

豪雨により増水した信濃川 (©NHK/2011年7月撮影)

- River deltas are vulnerable to water-related risks such as flood drainage and saltwater intrusion
- In recent years disaster risk management has become more important in the deltas due to rapid urbanization and increased frequency of extreme weather events
- Facility management based on experiences may not work in future with less workers in future
- Integration of real-time observation and more sophisticated facility operation and maintenance is essential

e-Asia Joint Research Program
Development of Machine Learning and Remote Sensing-based Water Management Platform for Sustainable Agriculture in Asian Deltas (MARSWM-ASIA)
2021 — 2024

To realize smart water management in deltas to minimize flood, saltwater and other water related damages to secure sustainable agricultural production.

RESEARCH OUTLINE

Establishment of an "Integrated Water Management Platform" to support the management of facility operators

Elemental Technologies to be adopted:

- (1) Combination of Numerical and Machine Learning Models
- (2) Remote sensing Technologies
- (3) Information and Communication Technologies

Real-time (or quasi-real-time) monitoring and forecasting system for water, farmland, and crop conditions

Reduce agricultural damage caused by flooding and saltwater intrusion and improving agricultural productivity through **ADAPTIVE WATER MANAGEMENT**

RESEARCH OUTLINE

Work Packages

WP1

Development of a numerical model for inundation analysis and saltwater intrusion

WP2

Development of ANN (machine learning) models for inundation analysis and saltwater intrusion

WP3

Development of a quasi-real-time situation monitoring system using remote sensing

WP4

System Design for Unmodern Regions

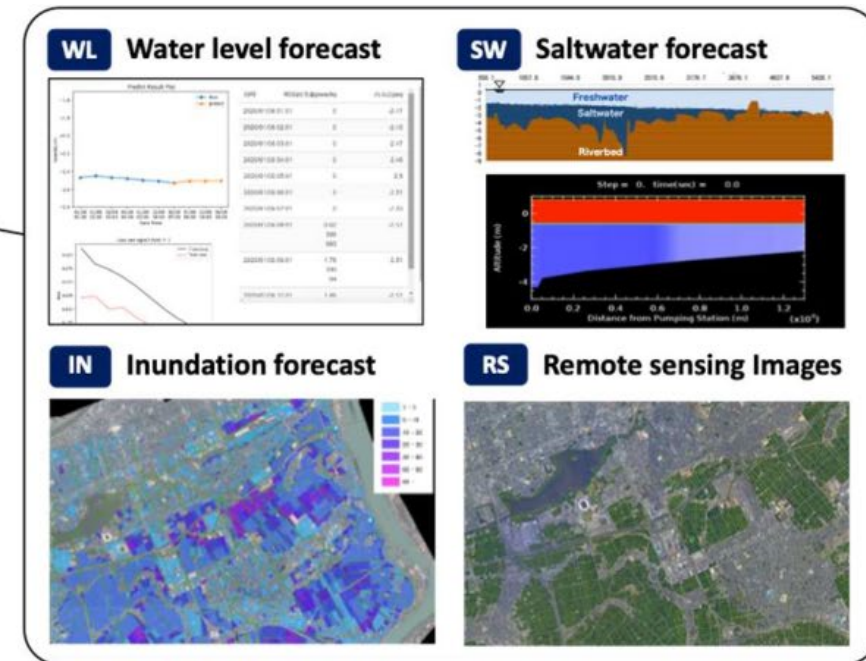

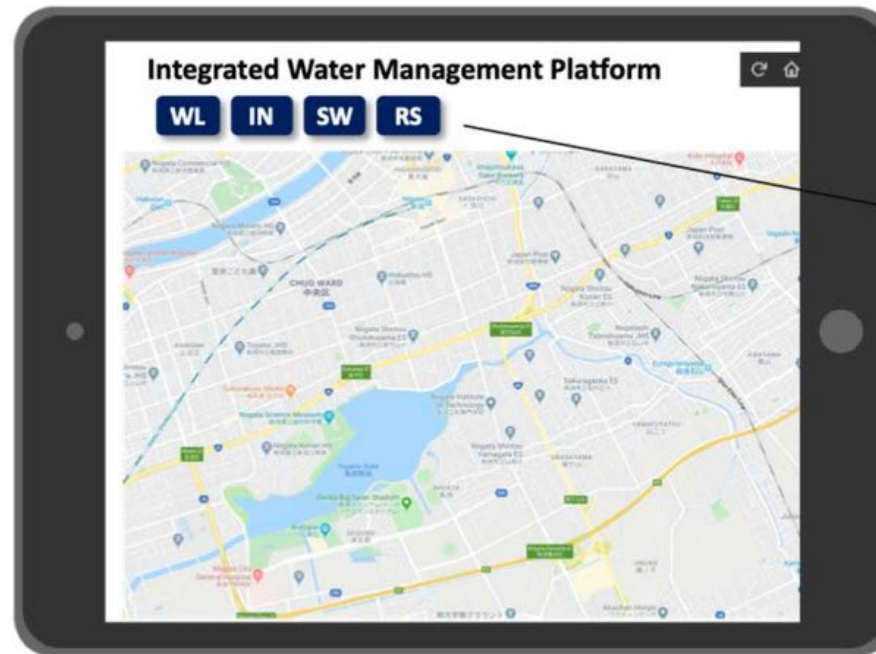

WP5

Development of sensor, ICT, and network technologies

Image of "Integrated Water Management Platform"

**EXPECTED
PROJECT
OUTPUT**

- Water facility managers, farmers, etc. can check the current status and forecasts using information terminals (PC, tablet, smart phone).
- Operate water facilities adaptively according to the situation

e-Asia Joint Research Program
Development of Machine Learning and Remote Sensing-based Water Management
Platform for Sustainable Agriculture in Asian Deltas (MARSWM-ASIA)
2021 — 2024

culation
ime

CLOSING REMARKS

- The project's approach is effective to adapt to climate change, since physical models can run with extreme scenarios and then used to train ANN model
- Flood and saltwater management using this platform will profit urban area as well as agricultural area.
- The project now develops the platform for Vietnam and Indonesia.
